ANULUM / RESEARCH INSTITUTE AND INVESTMENT PROGRAMME

# The organisation already in motion

Operating foundations + active architecture, research and integration · 13 October 2026

**HUMAN AUTHORITY**

Direction, budget, protocol freeze, defined computations, releases and publication

## 01 Organisation

**In progress · operating products and integration**

**INPUTS AND CONTROL**

Human intent, task scope and budgets
Named seats and durable messages
Explicit review and release authority

**WORKING BUILDING BLOCKS**

SYNAPSE-CHANNEL: claims, receipts, journal
DIRECTOR-AI / CLASS: grounding and action control
RIGOR-FOUNDRY, REMANENTIA and HushLine

**EVIDENCE PRODUCED**

Task-owned changes and source-bound reviews
Retained logs, handovers and memory
Audit and cost-record interfaces under integration

## 02 Domain software

**In progress · workbenches, components and tools**

**QUANTUM AND NEUROMORPHIC**

Quantum modelling, circuits, gradients and providers
SNN models, learning, Rust/RTL and hardware paths
Named component extractions and evidence tools

**CONTROL AND REACTOR SYSTEMS**

Phase analysis and controller compilation
Solver libraries, kernel, device cores and scaffolds
Domain-owned validation and calibration

**SHARED PRESENTATION AND CONTRACTS**

Studio platform and federating Studio hub
Evidence manifests, randomness and experiment lineage
Optional interfaces distinct from tested integrations

## 03 Discovery cycle

**In progress · protocols, harnesses and first-cycle integration**

**TWO CONCRETE EXPERIMENT STREAMS**

Fixed grid-detector experiment on held-out grids
Neural experiment: AdEx surrogate and validity boundary
Exact-object reviews and role/custody preparation

**THE CYCLE BEING BUILT**

Hypothesis → protocol → authorised domain run
Domain check → verdict → custody and replay
Admitted record → domain-owned update proposal

**OWNERSHIP AND ACCEPTANCE**

Discovery owns orchestration and the yardstick
Domains own models, results, instruments and oracles
Failed and null results remain in the record

## 04 World models

**In progress · research, model contracts and verification design**

**MODEL FAMILIES**

Oscillator / grid dynamics: first family
Plasma and control; neuromorphic dynamics
Quantum-device noise: candidate research family

**WORK AND DELIVERABLES**

Trajectories, baselines and learning methods
Conservation, reference-solver and contract checks
Open models with scoped verification reports

**THE PROOF TO PRODUCE**

Frozen evaluation criteria and retained attempts
Independent reproduction and explicit validity limits
Metered training/inference and cost per research cycle

## 05 Laboratory

**In progress · bench, qualification and partner interfaces**

**CURRENT BASE AND HARDWARE WORK**

Oscillator and electronics bench
Timing / RTL and measurement contracts
Neuromorphic hardware qualification work

**INTEGRATION WORK**

Requests through partner workflow engines
Calibration, measurement provenance and record return
Action boundary before physical actuation

**OUTPUT AND RESPONSIBILITY**

Instrument observations returned as evidence
Domain partners retain their hardware authority
Automation and partner access are active development

**JOINT FOUNDING OFFER**

Research partners + people + metered compute + funding routes → a sustained research institute

Work status is in progress. Release, demonstrated scientific result and hardware qualification are distinct facts.
